RESEARCH EXPERIENCE

- **Segmentation of Lung Tumor from CT Images using Deep Learning**, as part of B.Sc. thesis. *September 2019-February 2021.* Worked with Prof. Dr. M. Sohel Rahman.
  - Worked on Lung-Originated Tumor Segmentation from Computed Tomography Scan (LOTUS) Benchmark dataset.
  - Proposed a unique preprocessing technique by combining neighboring CT slices for context and wavelet transforms for texture analysis.
  - Experimented with several deep learning models and incorporated deep supervision in MultiResUNet for achieving the best results.
- **Agent Based Modeling of COVID-19**, *May 2020-Present.* Worked with Prof. Dr. M. Sohel Rahman.
  - Implemented and validated an Agent Based Model (ABM) with individual action details.
  - Examined the impacts of different interventions and the effectiveness of digital herd immunity.

- Worked on a scalable ABM for the districts of Bangladesh using contact matrix.
- Have been working on a project to develop COVID-19 forecasting models and data-driven responses to address high-priority public health challenges in Aspire to Innovate (a2i). The project is implemented by the ICT Division and Cabinet Division of the Government of Bangladesh.

- **Counting and Verifying Abelian Border Arrays of Binary Words**, *September 2019-Present*. Worked with Prof. Dr. M. Sohel Rahman.
  - Showed that the number of valid abelian border arrays of length n is 2^{n-1}.
  - Reduced the abelian border array verification problem to computing the abelian border array of a particular binary word to propose an $O\left(\frac{n^2}{\log^2 n}\right)$ time algorithm.
